Asterisk Project Security Advisory - AST-2014-008

Product	Asterisk	
Summary	Denial of Service in PJSIP Channel Driver Subscriptions	
Nature of Advisory	Denial of Service	
Susceptibility	Remote authenticated sessions	
Severity	Moderate	
Exploits Known	No	
Reported On	28 May, 2014	
Reported By	Mark Michelson	
Posted On	June 12, 2014	
Last Updated On	June 12, 2014	
Advisory Contact	Mark Michelson <mmichelson at="" com="" digium="" dot=""></mmichelson>	
CVE Name	CVE-2014-4048	

Description	When a SIP transaction timeout caused a subscription to be terminated, the action taken by Asterisk was guaranteed to deadlock the thread on which SIP requests are serviced.
	Note that this behavior could only happen on established subscriptions, meaning that this could only be exploited if an attacker bypassed authentication and successfully subscribed to a real resource on the Asterisk server.

Resolution	The socket-servicing thread is now no longer capable of dispatching synchronous
	tasks to other threads since that may result in deadlocks.

Affected Versions		
Product	Release Series	
Asterisk Open Source	12.x	All versions

Corrected In	
Product	Release
Asterisk Open Source	12.3.1
